SUMMARY

- Computing graduate with hands-on experience in software and game development, technical debugging, and LLM-assisted problem solving using GPT and Claude.
- Experienced adapting solutions from outdated documentation and tutorials to current frameworks/APIs, evaluating LLM-generated approaches through testing, with a strong foundation in Python, software specifications, and user-focused design.

SKILLS

- **AI / LLM:** GPT, Claude, LLM-assisted debugging, prompt-based problem solving, iterative prompt refinement
- **Programming languages:** Python, C#, C, Javascript, bash, Prolog
- **Tools:** Visual Studio, Git/Github, Unity, Godot

PROFESSIONAL EXPERIENCE

Game Designer & Developer - Serenity, Queen's University, Kingston, ON **Jan 2023 – May 2023**

- Collaborated with 2 team members to design and develop *Serenity*, an educational game featuring interactive stress-management and relaxation activities.
- Implemented gameplay mechanics and user interactions in Unity/C#, using GPT to investigate coding errors and compare implementation approaches during development.
- Nominated for "Best Video Game" among 2nd-year projects at the 2023 Creative Computing Showcase.

Teaching Assistant in Game Design, Queen's University, Kingston, ON **Jan 2024 – May 2025**

- Assisted students in troubleshooting and debugging game projects, diagnosing technical issues and guiding them toward practical solutions.
- Helped students translate broad game concepts into implementable systems while coordinating support with the professor, fellow TAs, and student groups.

Game Designer & Developer - Star Thief, Queen's University, Kingston, ON **Jan 2024 – May 2025**

- Collaborated with 4 team members to develop *Star Thief*, a rhythm platformer using a MIDI keyboard as a novel control scheme.
- Integrated a MIDI input detection API with Unity to capture and process real-time input for rhythm detection and gameplay.
- Used GPT and Claude to troubleshoot API/code compatibility issues and evaluate potential implementations, adapting solutions from existing documentation to the project's Unity version and validating them through testing; won "Best Video Game" at the 2025 Creative Computing Showcase.

Web Support, Maneko Living, Kingston, Ontario – Full Time **Aug 2025 – Nov 2026**

- Developed and maintained the Shopify e-commerce site, customizing UI, layout, and functionality while improving product sorting and browsing.
- Debugged functional issues across existing code and Shopify functionality, using GPT and Claude to analyze unfamiliar code, troubleshoot errors, and compare potential fixes.
- Adapted solutions from older tutorials/documentation to the current Shopify environment and validated LLM-generated suggestions through testing and debugging requirements.

EDUCATION

Bachelor of Computing (Honours), Queen's University, Kingston, ON **Sept 2021 – May 2025**

- Queen's University Excellence Scholarship
- Cumulative GPA of **3.97**
- Relevant courses: Game Design(A+), Software specifications(A+), Data structures(A), Logic for computer science(A)

ADDITIONAL INFORMATION

- Fluent in Mandarin and English
-
